

Noah CIVILISE

5th-year Student at EPITA – Computer Science Engineering

• civilise.noah@gmail.com • +33 6 60 39 97 86 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Objective: Seeking a 6-month end-of-studies internship in Artificial Intelligence or Image Processing starting from February 2027 in Bordeaux or Paris. Curious, adaptable, and motivated, I wish to deepen my skills in these fields within a stimulating environment.

Professional Experience

Final Year Project (PFEE) – Virtual Reality Engineer

Feb 2026 - Present

Dassault Systèmes

Design of a VR navigation tool (Minimap) for complex 3D environments (WebXR).

- Development of an immersive WebXR experience (Three.js, TypeScript) featuring a dynamic VR Minimap.
- Implementation of 3D algorithms ("World Detection") and asynchronous optimization via WebWorkers.

Data Science & Generative AI Intern

Sept 2025 – Jan 2026

Compagnie Européenne de Garanties et Cautions (Groupe BPCE)

- **RAG Architecture & LLMs:** "From scratch" design of an information extraction pipeline for hundreds of PDF balance sheets (SentenceTransformer, Qdrant, LLM).
- **Reliability & MLOps:** Strict validation of generated data (JSON, Pydantic, Luhn) and tracking of confidence metrics (77.1%) on a Streamlit dashboard.
- **Automation & NLP:** Development of an invoice control tool cross-referencing Excel data with text extracted from PDFs analyzed by an LLM (Time saved: >60%).
- **Industrialization:** Autonomous deployment of the automation tool (PyInstaller) to bypass IT constraints, and data workflow orchestration on Dataiku.
- **Business Intelligence:** Star schema data modeling and creation of a Power BI dashboard (DAX) to automatically detect drifts in bond granting rules.

Tutor

2022 – 2023

BackToBasics, EPITA

- Tutoring in algorithms, programming, and mathematics (individual and group sessions).

Technical Projects

Automatic License Plate Recognition (ALPR)

C++, Python, OpenCV, ML

"From scratch" development of an ALPR pipeline without Deep Learning. Prototyping (Python) and low-level porting (C++) for optimization (MyCV library, Random Forest, CI/CD). Processing < 380ms with 93% accuracy.

DermScan (Medical AI)

Python, OpenCV, FastAPI, RabbitMQ, Docker

Distributed dermatological diagnosis aid application (ABCDE rule). Computer vision pipeline (K-Means, PCA) and Machine Learning (MLP, sensitivity >85%) focused on explainability. Asynchronous microservices architecture with full CI/CD.

GStreamer Filter (GPGPU CUDA)

C++, CUDA, GStreamer

GPGPU optimization of a motion detection video filter. Real-time processing pipeline with CUDA acceleration (CUDA Graphs, Pinned memory).

Tiger Compiler

C++, Flex/Bison, LLVM

Team development of a complete compiler for the object-oriented Tiger language. Modular architecture: lexical/syntactic analysis, semantic verification, and code generation (LLVM IR). Implementation of code optimizations (inlining, escape analysis).

Education

EPITA – Computer Science Engineering School

2022 – 2027

5th year in Computer Science Engineering - **GPA: 4.0**

Le Kremlin-Bicêtre, France

Universidad del País Vasco

2024

Academic Exchange

San Sebastián, Spain

High School Diploma (Baccalaureate)

2019 – 2022

Mathematics and Computer Science (NSI) – **High Honors**

Montigny-Le-Bretonneux, France

Skills

- **Languages:** C++, Python, TypeScript, Java, C, Bash, HTML/CSS
- **Tools & Frameworks:** OpenCV, React, FastAPI, Docker, RabbitMQ, CMake, Git, CI/CD
- **Languages:** English (TOEIC 900/990 - Fluent), Spanish (B1), French (Native)
- **Soft Skills:** Adaptability, Teamwork, Autonomy, Problem Solving
- **Miscellaneous:** A2 & B Driving Licenses
